

People. Projects. Every workday.

A complete TS Safety Group overview

Field safety support, connected to the work.

On-site professionals, contractor-specific documentation, multilingual forms and a shared view of the next action.

In the field

Safety staffing, daily planning, inspections and practical follow-through.

Across the project

Employee and contractor portals, crew credentials, client records and staff CRM.

REVIEW DRAFT

October 21, 2026

This brochure brings the current website and agreed product direction together. Screens and records are examples; planned and proposed capabilities are identified throughout.

The right support. Where the work happens.

Start with the project, the crew and the way the work gets done.

Field safety staffing

On-site coordinators and leads; shift coverage; crew and contractor coordination.

Daily planning & project support

Pre-task planning, crew briefings, job hazard analysis, task controls, observations and follow-up.

Safety programs & documents

Site-specific safety plans (SSSP), EHS books, procedures, resources and project document reviews.

Equipment & site inspections

Fall protection, rigging, equipment, access, vehicles, fire safety and tag-out documentation.

Certifications & renewals

Credential records and exhibits, expiration visibility, renewal planning and training/course coordination.

Incident & corrective actions

Hazards and good catches, incident documentation, escalation, action owners and closure.

Service coverage and deliverables are scoped with each contractor. App screens describe the connected workflow under development.

Built around the site.

Bring people, approved plans and project context into the same conversation.

Project environments

Construction and steel erection; data centers and advanced facilities; industrial work; airports and arenas; power, mining and renewable-energy projects.

A practical document set

SSSPs, EHS procedures, JHAs, pre-task plans, inspection templates, training materials, emergency information and the records each client requires.

Coverage that follows the work

Coordinate the assigned safety professional, crews, supervisor, shift and changing field conditions.

Follow-through with an owner

Document observations, attach evidence, assign the next step and keep corrective actions visible for review.

Each contractor keeps its own requirements.

TS Safety Group adapts forms, training and documentation to the crew, language and site. Approved source documents remain the starting point.

Safety in Every Language.

English · Español · 中文 (Chinese)

TS Safety Group is a multicultural safety company. Every screen, form and inspection in our app can be switched to English, Español or 中文 (Chinese), with English always shown side by side, so every worker on the crew understands the hazards, the controls and why they matter. We tailor our forms, training and documentation to fit each contractor's crews, languages and site requirements.

Choose at sign-in

Each employee picks English, Spanish or Chinese, and the app adapts to that preference.

Side-by-side bilingual

English stays next to the chosen language for supervisors, clients and records.

Built for every contractor

Their own forms, translated and digitized, with short "Why it matters" guidance.

STATUS / WHAT THE REVIEW SHOWS

Shared product requirement / IN DEVELOPMENT. Current previews provide language and voice controls for mapped content. Remaining translations, approved terminology and device voice support require review before rollout.

Your day. Your next action.

Contractors → TS Safety Group → employee sign-in

The personal workspace opens around the employee's assigned contractor and project. Conrad Torres uses CT and the site safety manager / coordinator role. Staff CRM has a separate TS Safety Team entry.

My open items

PTPs awaiting review, inspections due, fire extinguisher checks, the next hourly walk and follow-up tasks.

Crew PTP review

Find the bolt-up or welding crew, see the submitted plan, open attachments and review acknowledgements.

Project records

Keep approved documents, equipment inspections, photos and certification references in context.

My time & schedule

Own-photo check-in, PTP acknowledgement, sign-out, weekly time review and upcoming work.

STATUS / WHAT THE REVIEW SHOWS

EXAMPLE DATA. The review supports browser-local drafts and example workflows. Real accounts, shared notifications, permissions and cross-device records are IN DEVELOPMENT.

From crew plan to weekly review.

Daily PTP / pre-task plan — PLANNED

- 01 A crew completes its digital plan and attaches the task information and supporting evidence.
- 02 The safety professional receives a completion notification, then reviews tasks, hazards, controls and attachments by crew.
- 03 Each employee acknowledges the plan using their own account and takes their own fresh check-in photo.
- 04 Check-in, acknowledgement and sign-out feed a weekly time review before approval and payroll processing.

Review before approval.

Requests for changes, missing acknowledgements and open items stay visible. A typed name or speech transcript must never silently approve a plan or sign a record.

STATUS / WHAT THE REVIEW SHOWS

PTP PLANNED. Photo capture and local time records are demonstrated separately from authenticated identity. A photo alone does not verify identity. Live notifications, payroll rules and payroll integration are IN DEVELOPMENT.

Hourly walks. Documented checkpoints.

Show the client where the safety professional's walk was recorded and what needed attention.

Checkpoint QR

Place project-specific QR codes at defined areas across the job. Record camera scans separately from manual code entry.

Time + location evidence

Keep employee, contractor, project, checkpoint, timestamp, device GPS coordinates and location accuracy together.

Observations + actions

Add the finding, photo or follow-up requirement at the point of the walk.

Client walk log

Review the checkpoint history and planned hourly coverage. Keep gaps visible instead of inventing a completed walk.

Evidence with context.

GPS is requested when the employee chooses to capture it. Missing coordinates remain missing. Device location alone does not prove presence.

STATUS / WHAT THE REVIEW SHOWS

QR/GPS records are a review workflow. Server timestamps, validated checkpoints, authenticated employees, geofencing and shared client reporting are IN DEVELOPMENT.

One form choice. Clear controls.

The same working standard across every contractor portal.

Paper inspection

View, zoom and print the clean HD paper document, without blue field shading. Preserve the contractor's source layout and branding.

Digital

Fill the mapped fields by voice or typing, review the answers, then download the original-layout record.

Language before work

Choose English, Spanish or Chinese. Keep the selection visible while working, with English alongside translated text.

Stay in control

Calendar and Today shortcuts; Stop speaking & listening; Clear form / Start over with Undo. Saved records are separate.

Recognizable equipment icons make aerial lifts, scissor lifts, ladders, fall protection and other document types easier to find. Show Paper inspection / Digital once; avoid a second row repeating the same choices.

STATUS / WHAT THE REVIEW SHOWS

Shared UX requirement. Voice capture depends on supported browser/device services. Review each transcript; ambiguous answers, signatures and approvals must not be inferred.

The equipment crews use.

15 planned inspection categories, organized so the next check is easy to find.

Fall protection

Full-body harness & lanyard
Self-retracting lifeline (SRL)
Anchorage connector

Lifting & equipment

Rigging & color code
Aerial lift / MEWP
Forklift / telehandler
Welder-generator
Equipment moving

Access

Ladder
Scaffold / float scaffold

Vehicles

Truck / vehicle
Trailer
Buggy / golf cart / UTV

Fire & site

Fire extinguisher
Site safety audit

Findings & follow-up

Pass/fail and notes, source evidence,
tag-out records and required corrective
actions, using the approved template.

STATUS / WHAT THE REVIEW SHOWS

Catalog PLANNED; supplied templates are mapped individually. The forms-design team owns approved layouts and checklists. This brochure does not create inspection criteria or OSHA citations.

TS form.
Your contractor's record.

A universal TS Safety Group harness inspection, filed under the company and project being supported.

Choose the contractor at the top left, then the project/job. Keep the equipment owner or employee separate from the inspector. Fill every mapped source line: equipment details, 20 check rows, results, notes and evidence.

Work in the source layout

Preserve the uploaded original. The universal working derivative removes a preprinted contractor from the generic TS form.

Voice + editable output

Select a field, speak, review and apply.
Download an editable, unsigned PDF and
review both pages before any formal
approval.

TS Safety Group | Harness Inspection Form

Universal working template excerpt · source page is available at full resolution in the portal. Displayed fields are not a completed inspection.

D&G; also retains its supplied branded harness layout with the shared language and voice controls. Authentic signatures and shared submission remain IN DEVELOPMENT.

Capture the facts. Keep the evidence.

MegaWatt's supplied incident-investigation material is part of its corresponding company workspace.

Guided information

Incident details, location, involved people, statements and the contractor's reporting packet.

Scene evidence

Photos, sketches, supporting documents and the approved source forms, preserved at usable resolution.

Reviewable answers

Language selection, voice/typing, editable transcripts and clear validation before progressing.

Company-specific records

Keep MegaWatt Solutions, Electrical and Construction context explicit. Shared branding does not grant shared employee access.

Draft ready for review means exactly that.

A local draft is not a report sent to the office. Legal authorizations, signatures and clinical classifications require the appropriate human review and must not be inferred from speech.

STATUS / WHAT THE REVIEW SHOWS

Browser-local prototype / EXAMPLE DATA. Secure incident storage, permissions, completed legal translations and actual office submission are IN DEVELOPMENT.

Know the crew. See the next renewal.

Open a project and see the employees assigned to it, their records and the items needing action.

Certification profile

Completed credentials, issuer, issue date, certificate reference and the source exhibit where supplied.

Upcoming training

Keep Registered, In progress and Planned separate from Completed. Do not present a scheduled course as a credential.

List / Month / Year

Scan the renewal list, open a month calendar or review the next 12 months. Red: expired or ≤30 days. Orange: 31–60 days.

Share with control

QR profile sharing, an expiring link, email and print are the intended sharing options, subject to document permissions.

Renewal dates come from the individual record, issuing requirement or approved project rule. Completion cards do not receive a made-up expiry. Renewal tasks and training coordination should explain the next action.

STATUS / WHAT THE REVIEW SHOWS

EXAMPLE DATA. Secure expiring shares, protected exhibits, email delivery and verified source records require identity and access controls; IN DEVELOPMENT.

Stay current. Know what comes next.

Certification reminders, employee-controlled text alerts and TS Safety Group refresher training.

Reminders as expiry approaches

An upcoming certification becomes an open renewal item. Suggested reminders at 60, 30, 14 and 7 days are a preview; the final schedule follows the approved company and credential rules.

Optional text messages

Employees choose their own SMS opt-in and can turn it off. Text alerts are off by default. A supervisor cannot opt in for the crew.

TS refresher videos

A dedicated Training & videos library lists 26 planned refresher topics across six categories, with search and English, Spanish and Chinese text. Approved videos will be added when available.

A verified renewal record

Review the next action, complete the required training or recertification, and upload updated evidence for verification. Preserve the credential's source record.

A refresher supports the next step.

Watching a safety video does not automatically renew a certification. Follow the issuer's requirements and verify the updated credential before recording it as renewed.

STATUS / WHAT THE REVIEW SHOWS

Live notifications and SMS delivery: IN DEVELOPMENT. Refresher videos: PLANNED. Review preferences stay on the device; no notifications, texts or training completions are sent or recorded by this preview.

One shared standard. The right company view.

Contractor → project → assigned crew → forms, certificates and open items

Derr & Gruenewald / DGCC

Austin's demo view, supplied CRM screens and branded harness forms; project-filtered crew and renewal visibility.

MegaWatt

Solutions / Electrical / Construction workspaces; supplied CRM and incident packet; shared HD, voice and language controls.

Red Cedar Steel

EHS Max reference workflow, Paper inspection / Digital, talk-to-fill and original-layout form downloads.

TS Safety Group

Conrad's own employee workspace plus the separate staff-only CRM. The same standards carry to future contractor portals.

Company context stays attached.

Forms and records belong to the selected contractor and project. Employee assignments, certification access and project permissions must be scoped explicitly.

STATUS / WHAT THE REVIEW SHOWS

Company views and supplied HD references use EXAMPLE DATA. Demo personas are not provisioned secure accounts. Real authentication, tenant permissions and shared storage are IN DEVELOPMENT.

The office view.

Hours, payroll readiness, billing, receivables and crew reviews in one working view.

Example User

Office - sample user

Supplied office dashboard reference · EXAMPLE DATA · Full-resolution artwork remains sharp when zoomed. Example User is a mockup persona; Conrad's personal workspace uses CT.

Week / Month / YTD; regular and overtime hours; per diem and reimbursements; payroll readiness and missing signatures; job budgets; billing and margins; AR aging, account balances and open/partial invoices; employee time and earnings.

Financial connections, payroll processing and accounting reconciliation are planned integrations, not live balances in this review.

The team behind the field work.

TS Safety Team is the staff-only CRM entry, separate from employee and client views.

Relationships & work

Contractors / Clients, Contacts, Sales, Jobs and Crew. Keep the account, job and responsible people connected.

Records & approvals

Certs & Documents, Time Entry, Approvals and Tasks. Track missing information and the next review.

People & expenses

Time Off, Reimbursements and Holidays, alongside assignment and staffing needs.

Business review

Invoicing, Billing & Accounting and Reports. Review draft, billed, collected, still-to-collect and held amounts.

Recruiting

ATS (Recruiting) for applicants, candidates, openings and hiring workflow. This is separate from contractor ATS Welding.

Useful reporting

Weekly hours, labor verification, payroll readiness, job use, receivables and export review, with example figures clearly identified.

STATUS / WHAT THE REVIEW SHOWS

Interactive CRM review / EXAMPLE DATA. Payroll, billing, recruiting and accounting connections require production services, permissions and approved rules.

Project Connect.

A current project picture.

The goal is a dynamic client record that stays live and up to date as the approved source information changes.

Client visibility

PTPs, inspections, SSSPs, certificates, renewal actions, hazards and stop-work/JHA records in project context.

Procore + HammerTech

Prepare records for upload/export into the client's systems. Procore integration is IN DEVELOPMENT; no live connection is claimed.

Safety Stats

TRIR, DART and LTIR cards with trends; project/date/crew filters; leading and lagging charts; project-by-indicator heat map.

Hours by project

Show the source and reporting period. "From Procore — integration IN DEVELOPMENT" stays visible until connected.

Work alongside the client's existing tools.

For MegaWatt, TS can support a workflow alongside Safety Mojo and supply field data, or discuss an alternative. On-site safety staffing and practical follow-through remain central to TS's service.

STATUS / WHAT THE REVIEW SHOWS

Dashboard figures EXAMPLE DATA. Live updates, validated rate calculations, API connections and automatic data feeds remain IN DEVELOPMENT. No unverified competitor comparison is asserted here.

Clear signs. Site-specific messages.

Five supplied sign concepts are being redesigned for professional, print-ready use.

- 01 Overhead Hazards / Hot Work
- 02 Crane Pad / Do Not Enter
- 03 Steel Erection / Welding
- 04 Red Rope Gate
- 05 Temporary Stairs Closed

Readable at the point of use

Clear hazard header, bold message and appropriate pictograms, with the required project instructions.

Ready for review and print

Vector PDF and high-resolution output are the design goal. Confirm message, dimensions, placement and site approval before issue.

STATUS / WHAT THE REVIEW SHOWS

DESIGN IN PROGRESS. Sign layouts belong to the dedicated design workflow. This brochure does not certify ANSI conformity or introduce new regulatory citations.

A practical toolkit. Room to grow.

Commercial options and advanced AI features remain Proposed.

Toolkit concept · Proposed

Earlier draft: \$0. Scope and availability require confirmation. Shared language and voice controls remain platform design requirements.

Full app concept · Proposed

Earlier draft: \$1,000/month. This is draft pricing, not an approved quote, contract, or confirmed production release.

Safety Bot · Proposed

Structured voice/form assistance, reviewable drafts, uncertain items marked Confirm, and photo-assisted hazard review for human assessment.

Connected operations · Proposed

Multi-site views, client branding, support options and cloud/NAS backup workflows, with integration and service details to be agreed.

The safety professional stays in control.

AI output is a draft for review. It must not silently approve PTPs, certify equipment, invent compliance citations, sign records or determine a medical/legal outcome.

Confirm final inclusions, commercial terms, storage, identity, support and implementation scope directly with TS Safety Group.

The companies in the working directory.

Supplied branding and proposed contractor workspaces — not a statement that every entry is an active client or endorsement.

tssafetygroupsolutions.com

Tyler Benson

Chief Financial Officer · TS Safety Group

PLANNED / IN DEVELOPMENT

PTP and production connections, secure sign-in, shared data, notifications, payroll and integrations require completion before rollout.

Proposed / EXAMPLE DATA

Paid options and pricing require agreement. Screens, employees, projects, statistics and financial figures shown are illustrative.

October 21, 2026 review edition. The final main website release remains subject to Conrad's approval. No login credentials or private employee records are included in this brochure.

Clear answers. Traceable sources.

A dedicated Field Safety Assistant for company policies, EHS manuals and applicable regulatory references. Proposed.

01 / Company policy first

Identify the approved document, revision, section, printed/PDF page and paragraph. If the policy is missing, show the gap first. Do not invent a requirement or citation.

02 / Applicable OSHA rule

Cite the exact 1926 or 1910 paragraph for the work setting. Keep construction and general industry distinct and check jurisdiction.

03 / Supporting evidence

Add relevant interpretation letters and authorized ANSI or other standards, preserving the edition, clause, context and permission to use the source.

An answer you can review

Keep each claim beside its source and flag missing, outdated or conflicting evidence for an EHS reviewer. Citation order does not mean company policy overrides applicable law.

A source-aware preview is available.

Search locally saved excerpts and inspect a verified fire-extinguisher reference example. Uploaded excerpts remain unverified. No AI-generated answer is presented as a complete company-specific determination.

STATUS / WHAT THE REVIEW SHOWS

Live AI, PDF/OCR indexing, approved shared knowledge, tenant permissions and automatic citation verification: IN DEVELOPMENT. Standards content requires suitable rights before AI ingestion.

A Monday task. A visible next step.

Weekly audit tasks and a practical builder help employees record observations against approved project requirements. Proposed.

Monday audit task

The intended service creates a task every Monday for each assigned employee and flags missing submissions. The device-local preview creates and catches up tasks when the portal opens.

Tailor the audit

Build sections and questions, choose required items, and adapt the example to the approved project audit. The supplied sample is not an approved company inspection form.

Speak, review, record

Voice-fill supports reviewable responses and notes. Action-needed items require follow-up notes; the employee reviews the record before a local example submission.

See what is still open

Keep this week, overdue weeks, saved drafts and submitted records distinct. Employee and project context stays attached. Saved submissions are protected from Clear / Undo.

Open items belong at the top.

The employee dashboard brings the assigned project, weekly audits, PTP reviews and inspection counts together. Shared supervisor reporting and non-submitter notifications require production services.

STATUS / WHAT THE REVIEW SHOWS

Unattended Monday scheduling, real crew-wide flags, reminders, identity and shared storage: IN DEVELOPMENT. Local records stay on the device and are not sent to a supervisor.
